Investigating practitioners' perspectives on project success factors

How performing a Q-study could help professionals

Introduction

- Lot has been written about success criteria & factors
- Still disappointing project performance
- Learning is hampered by time pressure
- Companies feel the need for professionalizing
- In terms of management: one size doesn't fit all!

Research questions

- *What are the perspectives of project professionals on project success factors?*
- *How could a Q-workshop contribute to knowledge creation?*

Q-Methodology & data

- Practice-based approach to identify patterns of shared subjective viewpoints across individuals
 - Q-statements: elements to sort, main question
 - P-set: respondents
- Q-sorting: respondents rank the statements from
 - -3 (least important)
 - via 0 (neutral)
 - to +3 (most important)
- As part of Masterclasses on improving project management
- Two sessions (P-sets)
 - Contractor organisation in process energy sector (43 respondents)
 - Owner organisation in real estate (31 respondents)
- Positive vibes after the sorting sessions
- Factor analysis to identify perspectives
 - The number of factors has to be chosen by the researcher
 - For both datasets the 4 factor solutions were selected
 - Factors to perspectives by qualitative analysis

Success factor framework

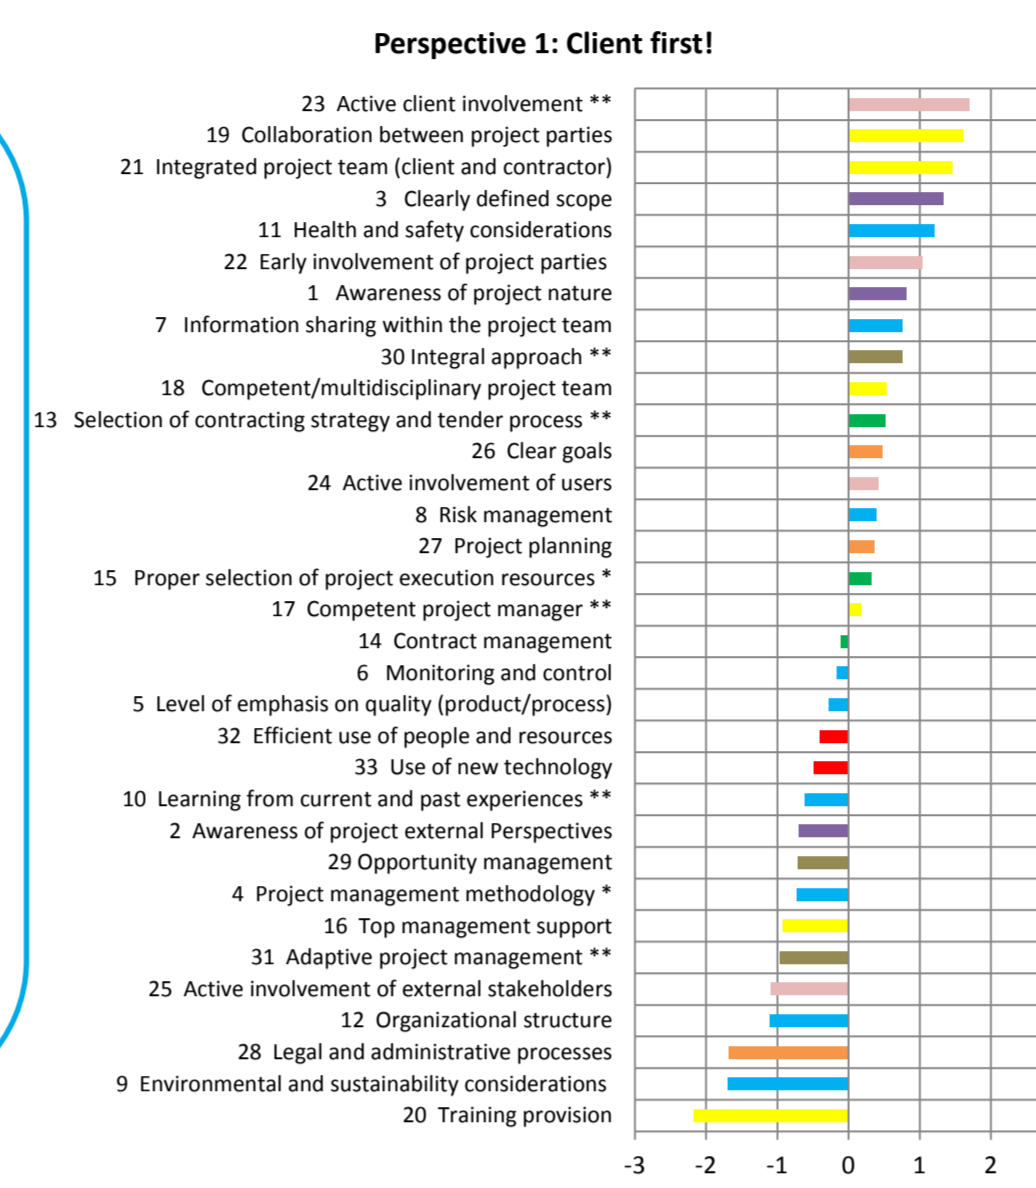

Project characteristics	1. Awareness of project nature 2. Awareness of project external Perspectives 3. Clearly defined scope
Project management process	4. Project management methodology 5. Level of emphasis on quality (product/process) 6. Monitoring and control 7. Information sharing within the project team 8. Risk management 9. Environmental and sustainability considerations 10. Learning from current and past experiences 11. Health and safety considerations 12. Organizational structure
Contracting	13. Selection of contracting strategy and tender process 14. Contract management
Leadership and team	15. Proper selection of project execution resources 16. Top management support 17. Competent project manager 18. Competent/multidisciplinary project team 19. Collaboration between project parties 20. Training provision 21. Integrated project team (client and contractor)
Stakeholder engagement	22. Early involvement of project parties 23. Active client involvement 24. Active involvement of users 25. Active involvement of external stakeholders
Policy and strategy	26. Clear goals 27. Project planning 28. Legal and administrative processes
Modern project management	29. Opportunity management 30. Integral approach 31. Adaptive project management
Resources	32. Efficient use of people and resources 33. Use of new technology

Observations

- Contractor point at the client and goes for integrated project team
- Client (owner) points at users and at general collaboration
- Agreement amongst the importance of the team & collaboration
- Training not considered part of projects
- Sustainability not explicitly valued

Results - contractor

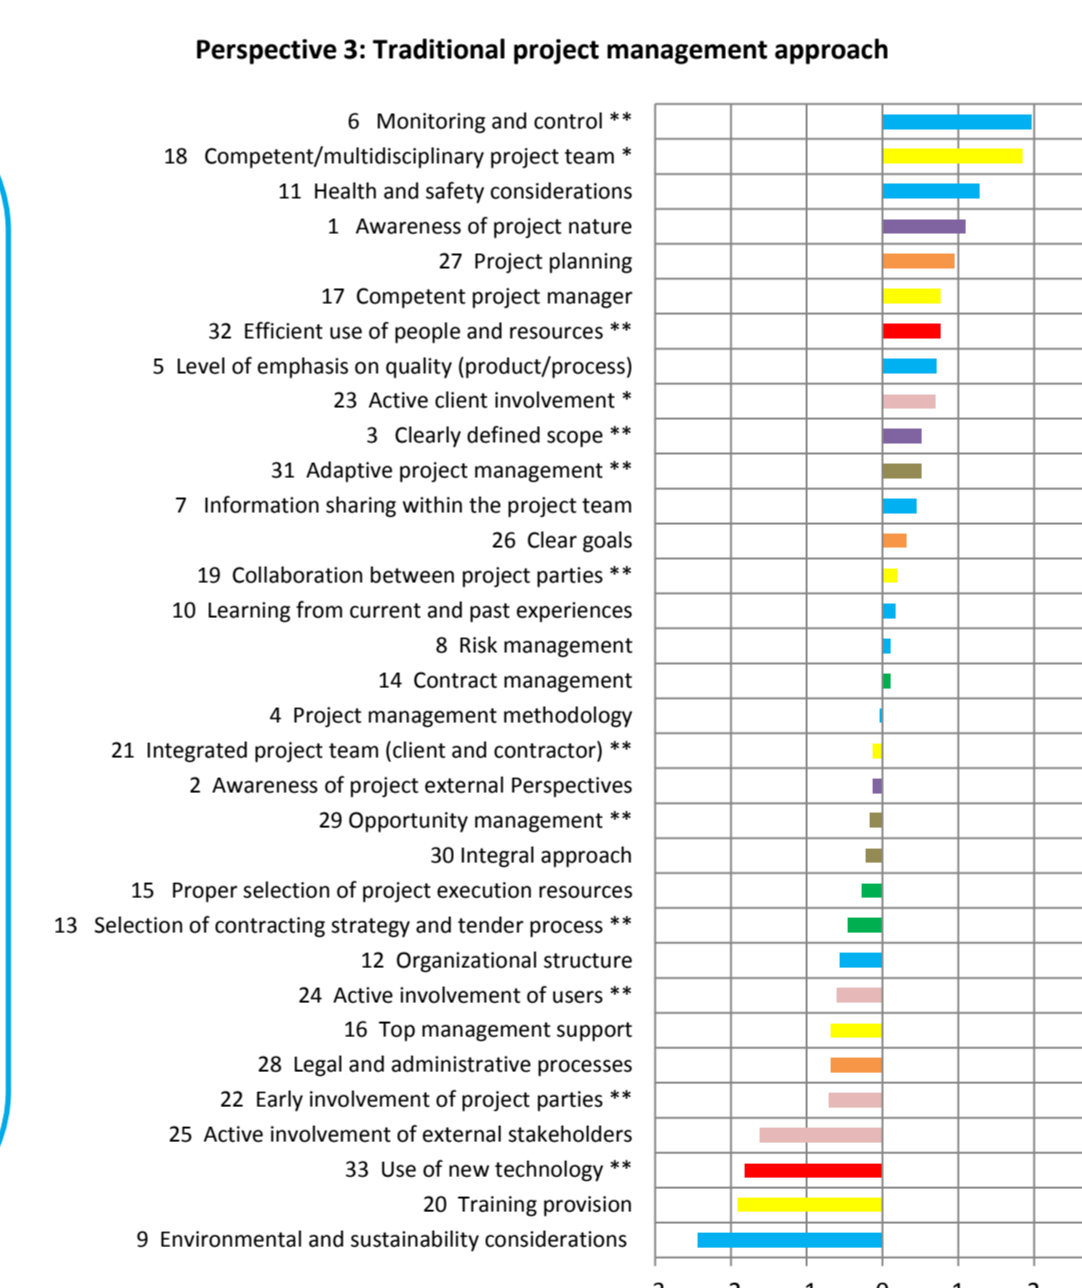

13 respondents
Actively involved client
Integral project approach
Not adaptive

12 respondents
Active involvement users
Top management support
No contract management

11 respondents
Monitoring and control
Competent & available team
Well defined scope
No use of new technology

7 respondents
Integral approach
Risk management
Opportunities
No clearly defined scope

Results - client

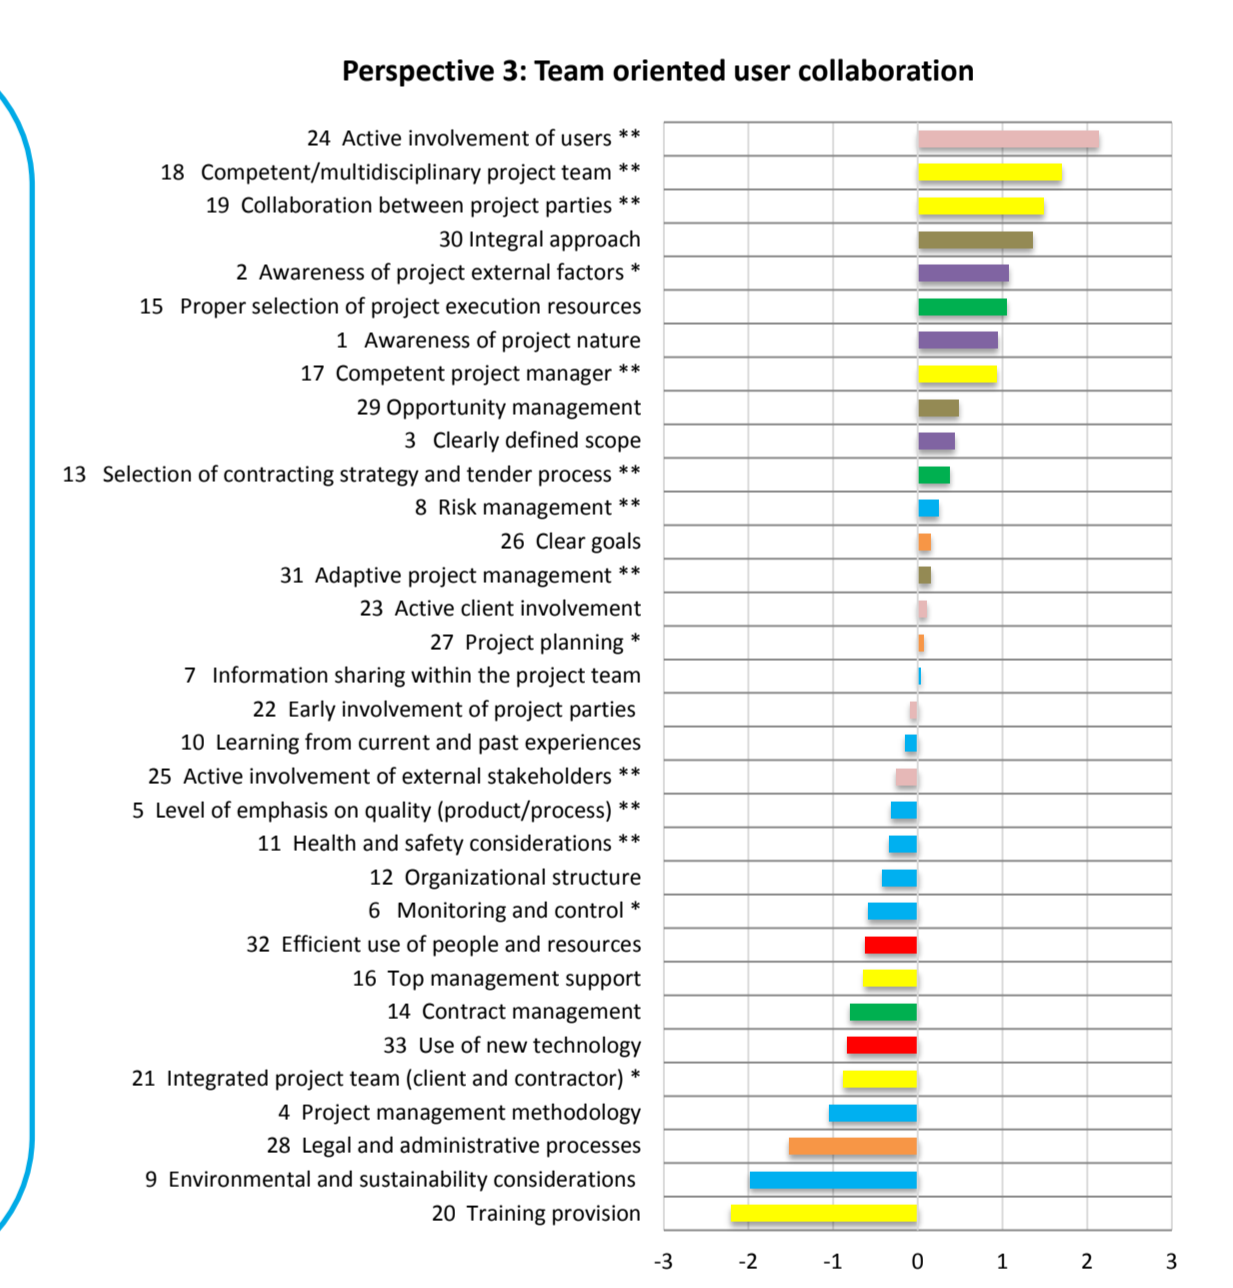

10 respondents
Clear goals
Clearly defined scope
Active client involvement
No use of new technology

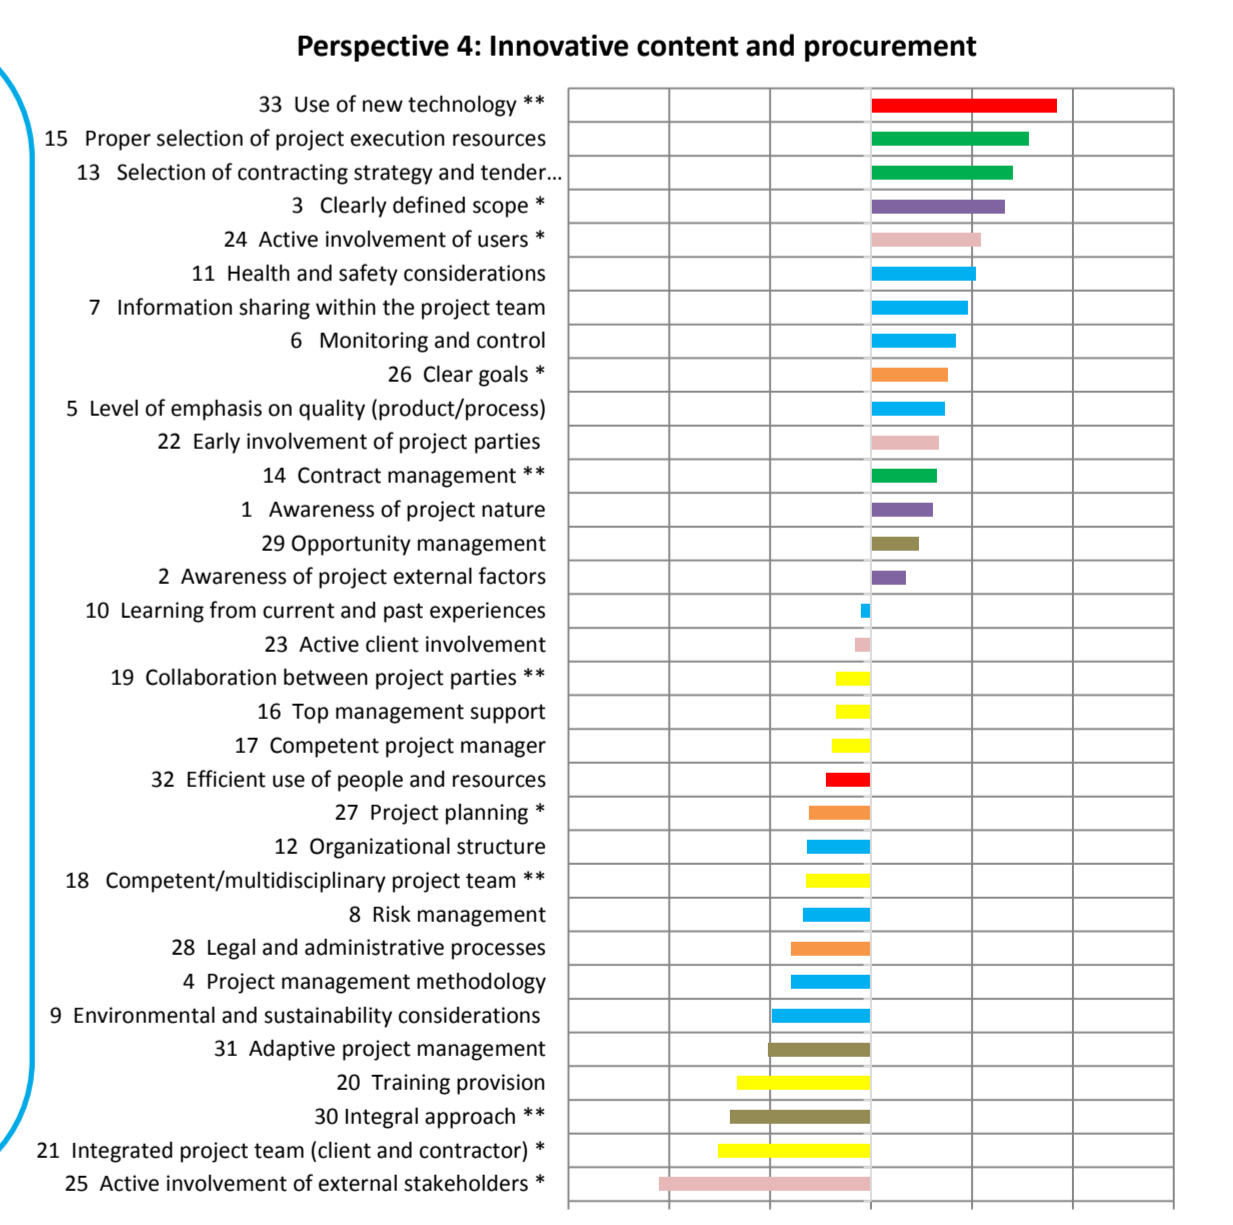

9 respondents
Quality focus
Risk management
Integrated project team
No user involvement

8 respondents
Active involvement users
Competent project team
Collaboration between project parties, but no integrated project team

4 respondents
Use of new technology
Selection of contracting strategy and tender process
Clearly defined scope
No integrated team, nor integral approach

Conclusion and way forward

- By participating in the Q-study awareness was created for the existence of different perspectives
- Participants experienced a positive contribution to their shared knowledge base
- Q-study as a interactive start-up activity in major projects?
- At different project stages? With different parties involved?
- Next step(s):
 - Towards fit-for-purpose: quantitative research into matching contexts, success criteria & success factors
 - Cross sectoral comparison
