

# "I LIVE IN.. THE FUTURE"

the neighbourhood Nieuw Waldeck in 2040  
from the perspective of the aging society

"I live in.. the future" is a toolkit designed to share experiences of possible future elderly residents with the stakeholders involved in planning a restructuring of the public space of their neighbourhood. The carrier of the toolkit contains different life stories of different future residents about their daily life in this neighbourhood. This carrier is presented in a session in which the stakeholders get a clear introduction, are individually immersed into one of the residents' perspective by the carrier

and this is followed by an open conversation about the stories and the stakeholders' personal reflection on them.

This toolkit can function as a conversation starter between the stakeholders involved to create strategies towards to future. The urban planners can use the outcomes of the session(s) to create spatial advices and plans in which the human perspective is integrated, incorporating solutions which meet the residents' needs.
