

# FLOAT

## The next generation hydrofoil

The Float is a free ride hydrofoil that can be used both for windsurfing and kitesurfing. The Hydrofoil is reliable, durable and easy to use. The design allows a wide range of consumers to use the hydrofoil by having an adjustable back wing.

The float consists of three parts, the mast, the front wing and the back wing. The front and back wing are connected to the mast with 6 mm torx bolts. The Float is provided with a convenient travel bag to store the parts.

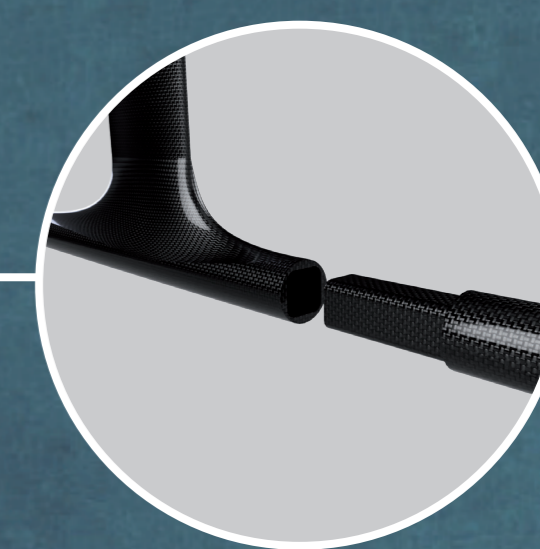

Made out of a 100% carbon fiber composite construction

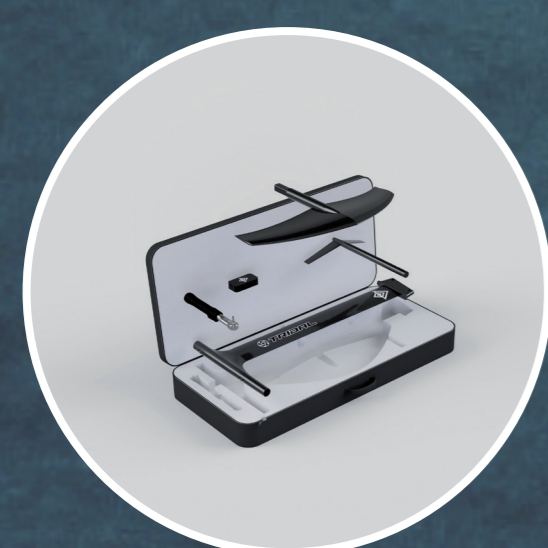

Universal Tulle box connection

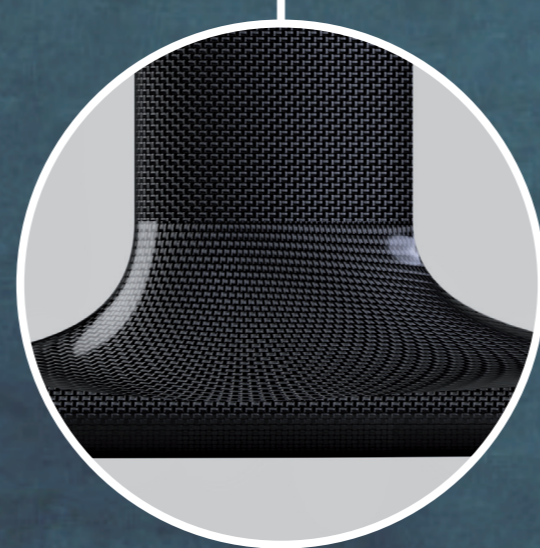

Adjustable back wing to enlarge or shorten the fuselage

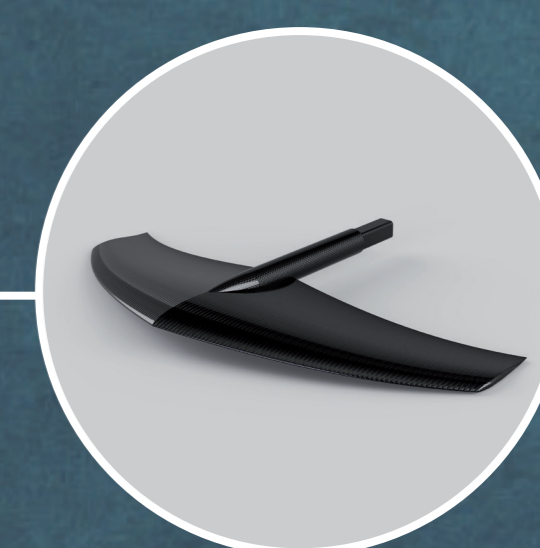

Strong square front wing connection pin

Convenient storage bag to store parts

Large transition mast and fuselage to ensure a strong bond

900 cm<sup>2</sup> freeride front wing
